Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKPZ); Email s.wiemann@dkfz-heidelberg.de;
sequenced by Qiagen (Hilden/Germany) within the cDNA sequencing
consortium of the German Genome Project.
This clone (DKF25)s661186) is available at the RZPD Deutsches
Ressourcenzentrum fuer Genomicoschung GmbH in Berlin, Germany.
Please contact RZPD for ordering:

Tissue Procurement: Dr. James Lin University of Iowa CDNA Library preparation: Dr. M. Bento Soares, University of Iowa CDNA Library Arrayed by: Dr. M. Bento Soares, University of Iowa DNA Sequencing by: Dr. M. Bento Soares, University of Iowa Clone Distribution: Distribution information can be found at http://genome.uiowa.edu/distribution/mousefl.html
This clone was contributed by the Brain Molecular Anatomy Project (BMAP)

were found in this cDNA

The following repetitive elements were found in this sequence: 602-707, >B1-F#SINE/Alu (matched compliment)

Seq primer: pYX-5.

Site_2: Not I: The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarcse
gel.Pirst strand cDNA synthesis was primed with Oligo-dr
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction ,ligated
with EcoR I adaptor , digested with Not! and then cloned
directionally into pYX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is TTATTGAAGT. This library was created for the University
lowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
```

```
/note="Organ: placenta; Vector: pExpress-1; Site_1: ECORV; Site_2: Not1; RNA obtained from three placentas from female C57/BLG mouse at 16 days pregnancy. Tissues were snap-frozen and kept at -80C for two days before RNA extraction and purification (Tri-reagent method). cDNA was primer: 5'-pGACTAGTTCTAGATCGGAGCGCCCC(T) 25-3' and cloned into the ECORV/NOTS sites of pExpress-1. Size-selection >0.75kb resulted in an average insert size of 1.1 kb. This primer; nanoquantity library is normalized to COC5 (non-normalized primary library is normalized to COC5 (constructed by Express Genomics (Frederick, MD)."

The method involves testing the test substances for its ability to inhibit the activity of GADD34-like (GADD34L), also referred to as elf2alpha-specific regulatory subunit of phosphatase, and identifying the sest substance which inhibits the activity of GADD34L.                                                                                                                                                                                                                                                                                                    7;
                                                             The present invention relates to a method of screening several test substances for preventing or treating diseases involving oxidative stress such as neuronal ischaemia, heart ischaemia, renal damage induced by ischaemia or toxins, autoimmune diseases and neurodegenerative disorders. The method involves testing the test substances for its ability to inhibit the activity of GADD34-1ike (GADD34L), also referred to as elf2alpha specific regulatory subunit of phosphatase, and identifying the test substance which inhibits the activity of GADD34L. The present

The present invention describes primer sets for synthesising 5602 full-

(a) an oligo-dr primer and an oligoniclectide complementary to the

complementary strand of a polynucleotide comprises one of the 5602

(c) an oligo-dr primer and an oligoniclestide comprises one of the 5602

(c) an oligoniclectide comprises at least 15 nucleotides; or (b) a combination

of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination

of an oligonucleotide comprises a sequence complementary to the

complementary strand of a polynucleotide which comprises a 5'-end

complementary strand of a polynucleotide which comprises a 5'-end

complementary strand of a polynucleotide which comprises a 5'-end

complementary strand of a polynucleotide which comprises a folial sequence, where the

complementary strand of a polynucleotide of sequence complementary to a

polynucleotide which comprises at least 15 nucleotides and the combination of

the 5'-end sequence(3'-end sequence is selected from those defined in the

specification. The primer sets can be used in antisense therapy and in

complementary full-length cDNAs. The primers are also useful for the

detection and/or diagnosis of the abnormality of the proteins encoded by

the full-length cDNAs. The primers allow obtaining of the full-length

contains and and sequences, and AAH13632 to AAH13632 represent human amino acid sequences, and AAH13632 represent

coligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RYWTKLLSQLLALLPSLFQKLLLWSQLSGGLIPTRWLDFAASYSALRASRGREESDAPTV 114
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MEPGIGGSRKRLGPRAGFRFWPPFFPRRSQAGSSKFPTPLGPENSGNPILLSSAQPETRV 60

AAC97991 to AAC98763 encode the human colon cancer associated proteins, called human colon cancer antigens, given in AAB53234 to AAB54006. The human colon cancer antigens can have cytostatic, cardioactive, muscular; neuroprotective, immunomodulatory, gynaecological, gastrointestinal, culnerary, nephrotropic, antiinfective and antibacterial activities, and can be used in gene therapy. The colon cancer antigen polymucleotides, proteins and antibodies to the proteins are useful for the prevention, treatment and diagnosis of colon disorders, such as colon cancer. The colon disorders such as colon cancer. The colonnelectides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins may also be used to prevent diseases such as neural disorders, immune system disorders, wounds, renal disorders, reproductive disorders, immune system cardiovascular disorders, reproductive diseases, and cardiovascular disorders. AAC98764 to AAC98772 and AAB54007 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       655

The proteins can have activities based on the tissues and cells they are expressed in, such as: antinflammatory; antirheumatic; antiatratrict; immunosuppressive; antibacterial; endocrine; cardiant; cardiavascular; antianaemic; antiagregant; haemostatic; unlorary; cardiavascular; antianaemic; antiagregant; haemostatic; unlorary; antidlabetic; cytostatic; neuroprotective; antiagressunt; noctropic; antigarkinsonian; and immunostimulant. The proteins and polynucleotides entidabetic; cytostatic; neuroprotective; antisense therapy and vaccine production. The proteins and polynucleotides cenceding them can be used in gene therapy, antisense therapy and vaccine production. The protein and for the treatment and diagnosis gonists or antagonists of a protein and for the treatment and diagnosis of a forcein and for the treatment and diagnosis confidence associated with the activity of a protein e.g. inflammation, rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, haematopoietic disorders

The method is useful for examining the ischaemic condition (e.g. compressive ischaemia or vasospassic ischaemia) by measuring expression levels of particular genes (ABI99202 to ABI99912, encoding the protein sequences in ABB57020 to ABB57314) or by determining the protein profile of a gene group comprising these genes. The expression levels or expression profile broiders by these genes are used as an indicator when screening for ischaemic condition-improving drugs or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         667
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             123

The invention relates to an inducible progression-elevated gene-3 (PEG-3 gene) regulatory region functionally linked to a gene encoding a product that causes or may be induced to cause the death or inhibition of cancer cell growth. A vector of the invention which contains a gene encoding thymidine kinase or a product which causes the cell to express a specific antigen can be administered along with gancyclovir or acyclovir, or an antibody or fragment to the antigen, respectively, to treat cancer in a subject. The PEG-3 gene is useful for generating new cloning and expression vectors, transfected cells, and for developing methods for cultured growth of such cells. The PEG-3 polynucleotide is also useful as a source of primers and probes to study the progression of cancer, and to detect the presence of the gene. The present sequence represents the amino acid sequence of the rat MyD116 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    LLSQLLALLPSLFQKLLLWSQLSGGLIPTRWLDFAASYSALRASRGREESDAPTVQKSLS 119

The present sequence represents a human apoptosis associated protein
CC (3ADD34). It is encoded by a growth arrest and DNA damage-inducible gene
CC 34. It is used in an assay method for identifying an anti-viral agent
CC that can affect the activity or expression of a nucleotide sequence or
CC its expression product. The assay method comprises contacting an agent
CC its expression product. And determining whether the agent affects the
CC with a nucleotide sequence coding for a serine/threonine phosphatase or
CC its expression of the nucleotide sequence. The assay is used for
CC activity or expression of the nucleotide sequence. The assay is used for
CC activity or entiviral agents useful in the treatment of human viral

The invention discloses a composition comprising two or more isolated rate or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the movel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a arrangle trasue of a first animal that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound for identifying a compound or small molecule that regulates the activity of one or more of the cativity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating compound that regulates the activity of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating compulates its activity is useful for preparing a medicament for treating compulates its activity is useful for preparing a medicament for treating computed by sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: the specification, but was obtained in electronic form darring an electronic form darring to method. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form darring parent of the specification, but was obtained in electronic form darring patent of the proposition of the profile of t

The invention discloses a composition comprising two or more isolated rate or human polynuclectides or a polynuclectide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also claimed are a vector comprising the novel polynuclectide, a host cell comprising the vector, a method for identifying a nuclectide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynuclectide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynuclectides, a method for producing a pharmaceutical composition, a method for producing a pharmaceutical composition, a compound or activity in an animal of one or more of the polypeptides given in the production of a pharmaceutical composition, a method for identifying a compound expect in the cativity in an animal of now or more of the polypeptides given in the production and animal of now or more of the polypeptides given in the production and paramaceutical composition or an endicating and animal or now or identifying a compound useful in the production and animal compound use of the polypeptides given in the production and animal compound use of the polypeptides given in the production and animal compound use of the polypeptides given in the production of the polypeptides given in the production of the polypeptides given in the production of the polypeptides of the polypeptides given in the production of the polypeptides of the polypeptides given in the production of the polypeptides of the polypeptides given in the production of the polypeptides of the polypeptides given in the production of the polypeptides 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           pain and a pharmaceutical composition comprishing the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (Chung), chronic constriction therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     168
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 223
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               60 LLSQLLALLPSLFQKLLLWSQLSGGLIPTR-WLDFAASYSALRASRGREESDAPTVQKSL 118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         101 SSSLPEAWG--LLDD--DDGMYGEREATSVPRGQGSQFADGQ----RAPLSPSLLIRTLQ 152
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       --DYLPQLGLRCQSSAGGQFVGFRTLT----PESCYLSEDGCHPQPLRAEMSATA--- 273
New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       LISPVMGLLSR-----AWSRLR-GLGPLEPWLVEAVKGAAL-------

The invention discloses a composition comprising two or more isolated rate or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also comprising the vector, a method for identifying a nucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the apparanceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that molates its activity is useful for preparing a medicamental pares in any of a polymental narve infury. (Phumo) chronic constriction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                         New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                      Claim 1; Page; 1017pp; English.

gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or disgnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13631 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the

The introductor relates to the novel association of protein squares (and the genes which encode them) to the NF-kapaB pathway. The invention may be useful for the production of compounds with an antinflammatory, cytostatic, hepatotropic, virucide, antiarthritic, antirheumatic, gastrointestinal-Gen, antiasthmatic, antiarthritic, antirheumatic, immunomodulator, cerebroprotective, vasotropic, immunosuppressive or culmerary activity or for gene therapy. The proteins and nucleotides are useful for diagnosing, preventing, treating, or ameliorating conditions or diseases associated with the NF-kapaB pathway. The condition is an immune disorder, an inflammatory disorder.

CC diseases associated with the NF-kapaB pathway. The condition is an condition of disease. Hodgkin's lymphomas, haematopoietic tumours, hyper-IgM syndromes, hypohidrotic ectodermal dysplasia, X-linked anhidrotic cetodermal dysplasia, immunodeficiency, viral infections, HTLV-1, hepatitis B, hepatitis C, EBV, influenza, viral replication, host cell cetodermal dysplasia, steuman activity, disorders athema, atherosclearosis, cachexia, euthyroid sick syndrome, stroke, EAE, autoimmune disorders, disorders related to aberrant acute phase responses, hypercongenital conditions, birth defects, necrotic lesions, wounds, organ transplant rejection, conditions related to organ transplant conditions, conditions related to organ transplant crejection, conditions related to organ transplant crejection, conditions and the path of a human protein which is subject to the novel association with the NF-kapaB pathway of the NF-kappaB pathway; antiinflammatory; cytostatic; hepatotropic; virucide; antiarthritic; antirheumatic; gastrointestinal-Gen; antiasthmatic; antiarthritic; antirheumatic; gastrointestinal-Gen; antiasthmatic; immunosuppressive; vulnerary; gene therapy; immune disorder; inflammatory disorder; NF-kappaB regulation; cancer; aberrant apoptosis; hepatic disorder; NF-kappaB regulation; cancer; aberrant apoptosis; hyper-Igh syndrome; hypohidrotic ectodermal dysplasia; X-linked anhidrotic ectodermal dysplasia; immunodeficiency; viral infection; HIV-1; HTLV-1; hepatitis B; hepatitis C; EBV; influenza; viral infection; how call survival; evasion of immune response; rheumatoid arthritis; inflammatory bowel disease; colitis; asthma; attenceclerosis; cachexia; euchyroid sick syndrome; stroke; EAE; autoimmune disorder; hyper immune activity; (and New isolated polynucleotides and polypeptides associated with NF-kappaB pathway, useful for diagnosing, treating, or preventing disorders or diseases associated with NF-kappaB pathway. aberrant acute phase response; hypercongenital condition; birth defect, necrotic lesion; wound, organ transplant rejection; aberrant signal transduction; proliferating disorder; cancer; This invention relates to the novel association of protein sequences Human NF-kappaB pathway-associated protein SeqID90, Carman J; Claim 6; SEQ ID NO 90; 237pp; English. Claim 17; Fig 13A-C; 225pp; English.

This polypeptide comprises human progression elevated gene-3 (PEG-3) protein. The amino acid sequence was deduced from an isolated CDNA clone (see AAV65765). PEG-3 expression (1.5 and 2.8 kb transcripts) is elevated in most human tumour cell lines. The amount of PEG-3 in a cell is also an indicator of DNA damage in that cell. Cells in which a reporter gene in under control of the promoter or regulatory region (see AAV65766) of the rat PEG-3 gene can be used in methods for identifying agents that modulate PEE-3 expression or the ability of PEG-3 to induce progression, or for determining whether an agent is capable of inhibiting DNA damage and repair pathways, cancer progression or oncogene-mediated rannals and repair pathways, cancer progression or oncogene-mediated can any agent is an also be identified using send cells. Transgenic animals and vaccines comprising PEG-3 pulpapetides and an immune response channed to claimed. Antibodies (especially monoclonal) to the PEG-3 may be used to determine tumour progression of a cell. Cells can be protected from chemotherapeutic damage by inhibiting or eliminating the expression of PEG-3 in the cells. The methods can be applied to a protected from chemotherapeutic admage by inhibiting or eliminating the tumour grognession and applied to a protected stands or managemage or managemagemagemagemic tumorigenesis, and agglessis or metastesis, to melanoma, brain, cervical, tumorigenesis, lung or colorectal cancer, neuroblastoma or glioblastoma (all

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                            698
